INFORME TÉCNICO

BASE DE DATOS DE YACIMIENTOS DE LA REPÚBLICA ARGENTINA

Informe anual 2025

1. Marco conceptual

La Ley 24.224 establece como competencia del Estado Nacional realizar el levantamiento geológico y temático del territorio continental, insular, plataforma submarina y territorio antártico de la República Argentina y define el desarrollo de Programas Nacionales de Cartas Geológicas y Temáticas.

La actualización de la Base de Datos de Yacimientos de la República Argentina (BDYRA) está establecida por la normativa para la confección de Cartas Minero-Metalogenéticas y Cartas de Minerales Industriales, Rocas y Gemas, para el área que éstas abarcan. Asimismo, la realización de informes de evaluación del potencial y promoción del uso de recursos minerales, ya sea por sustancia, por área geográfica o por otro criterio, implica en todos los casos una tarea de recopilación de antecedentes que involucra la consulta y actualización de la base de datos de yacimientos. Resulta de interés, por lo tanto, establecer una dinámica de actualización permanente de la base, cuyos logros se reflejan en el presente informe.

Las áreas de responsabilidad del personal que participa en la actualización están distribuidas, aunque por tratarse de una base de datos única, los permisos para creación, edición y borrado de registros otorgados a cada usuario aplican sobre su totalidad. Se asignan prioritariamente sectores geográficos y/o grupos de depósitos agrupados por modelo metalogenético o sustancia a cada persona involucrada en la actualización de la BDYRA.

La evolución en la cantidad de los depósitos resulta del neto de las altas y las bajas producidas en el período comparado. La base de datos está sometida a un proceso de control de calidad de la información que ocasionalmente motiva la exclusión de registros. Generalmente la evolución en el número total de registros es creciente, reflejando el hallazgo de nuevos depósitos debido a la actividad exploratoria, y la documentación de registros en la base de datos producto de la ejecución

de proyectos cartográficos e investigaciones.

La actualización fundamentalmente produce la modificación de la información contenida en cada registro mediante geolocalización más precisa, incorporación de información reciente adicional, consulta de más fuentes de referencia, etcétera.

Las modificaciones pueden efectuarse no solo sobre la tabla principal que contiene la identificación del depósito, sino sobre cualesquiera otras de las decenas de tablas, relaciones, diccionarios, que componen el sofisticado modelo de datos de la BDYRA.

En la Base de Datos de Yacimientos un registro corresponde a cada depósito cartografiado en la geodatabase continua SIGAM (Sistema de Información Geológica Ambiental Minera del SEGEMAR), utilizada para la producción de Cartas Minero-Metalogenéticas y Cartas de Minerales Industrias Rocas y Gemas, y para el despliegue de yacimientos minerales en el sistema de información geográfica y su visor web.

Se encuentra disponible para su visualización en el Visor Principal del SIGAM (<https://sigam.segemar.gov.ar/visor/>) en la solapa Recursos Minerales, activando las capas Depósitos Minerales Industriales 250k y Depósitos Minerales Metalíferos 250k. También se despliega al seleccionar los mapas prefigurados Depósitos Minerales Industriales y Depósitos Minerales Metalíferos.

La información desplegada en los mapas se encuentra asimismo disponible para su descarga en el Catálogo de Datos Abiertos Geoespaciales del SIGAM, en

<https://sigam.segemar.gov.ar/geonetwork39/srv/spa/catalog.search#/metadata/edf20fa93001726f635e48a4e10a6065e0ed49b4> para depósitos de minerales metalíferos, y en

<https://sigam.segemar.gov.ar/geonetwork39/srv/spa/catalog.search#/metadata/5be53d991b063123fb8cfa49d775b90bbb939c8c> para depósitos de minerales industriales.

2. Personal interviniente

La tarea permanente de actualización de la base de datos de yacimientos de la República Argentina se organiza con un criterio general de distribución de áreas geográficas y temáticas de incumbencia por

agente. El esquema es orientativo y flexible, dado que los permisos de edición aplican a la base de datos completa, y la visualización de registros preexistentes para su eventual actualización se produce de manera no sistemática, en la medida en que son empleados para proyectos de la más diversa índole.

| Personal interviniente en la carga y actualización de la Base de Datos de Yacimientos de la República Argentina | |
|---|--|
| APELLIDO Nombre | Observaciones |
| JOHANIS Pablo | Dirección general / Minerales industriales / Mesopotamia y Litoral |
| FERPOZZI Federico | Administración SIGAM y base de datos / Publicación |
| LARCHER Nicolás | Coordinación / Jujuy, Salta y Catamarca |
| PEÑARANDA Franco | Proyectos especiales (Actualizaciones <i>ad hoc</i>) |
| VARAS Rosana | Córdoba, Tucumán, Santiago del Estero |
| CECENARRO Facundo | Mendoza, San Luis |
| RODRÍGUEZ Diego | San Juan, La Rioja |
| HERNANDO Ignacio | Río Negro, Neuquén, La Pampa |
| TURRA Juan Manuel | Tierra del Fuego, Santa Cruz, Chubut |
| JUÁREZ Pablo | Minerales industriales |

3. Evolución anual

Durante el período comprendido entre diciembre de 2024 y noviembre de 2025 se produjo una disminución neta en la cantidad de registros, producto de tareas de depuración de la base de datos con remoción de entradas duplicadas o unificación de registros próximos equiparables. La tarea se refleja en el alto número de registros actualizados, superior al número de registros totales de la base de datos.

| Evolución neta en la cantidad de depósitos incluidos en la Base de Datos de Yacimientos de la República Argentina | |
|---|-----------------------|
| Fecha | Cantidad de depósitos |
| 10/12/2024 | 3663 |
| 11/11/2025 | 3508 |
| Total de registros actualizados en todas las tablas durante el período 10/12/2024 a 11/11/2025 | 3870 |

4. Índice de la base de datos

Se proporciona un documento índice generado por el aplicativo de carga de la base de datos el 11/11/2025, que captura el estado de la base de datos en ese momento. Los registros de depósitos tienen un identificador único, DEPNO, que junto con su ubicación geográfica, denominación y sustancia, permiten su identificación. El resto de las características consignadas para cada depósito integra tanto la base de datos como una ficha-mina en formato html, cuya URL de acceso se proporciona para mayor información.
